

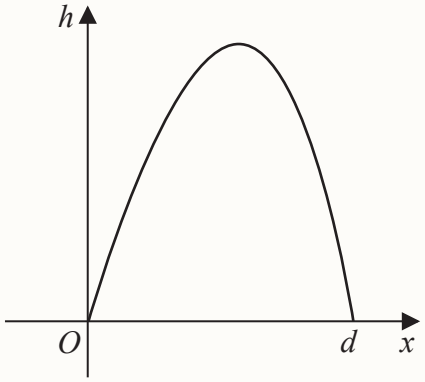

**Figure 4**

Figure 4 is a graph showing the path of a golf ball after the ball has been hit until it first hits the ground.

The vertical height, $h$ metres, of the ball above the ground has been plotted against the horizontal distance travelled, $x$ metres, measured from where the ball was hit.

The ball travels a horizontal distance of $d$ metres before it first hits the ground.

The ball is modelled as a particle travelling in a vertical plane above horizontal ground.

The path of the ball is modelled by the equation

$$h = 1.5x - 0.5x\,e^{0.02x} \qquad 0 \leqslant x \leqslant d$$

**Use the model to answer parts (a), (b) and (c).**

(a) Find the value of $d$, giving your answer to 2 decimal places.

(*Solutions relying entirely on calculator technology are not acceptable.*)

**(3)**

(b) Show that the maximum value of $h$ occurs when

$$x = 50\ln\left(\frac{150}{x + 50}\right)$$

**(4)**

Using the iteration formula

$$x_{n+1} = 50\ln\left(\frac{150}{x_n + 50}\right) \qquad \text{with } x_1 = 30$$

(c) (i) find the value of $x_2$ to 2 decimal places,

(ii) find, by repeated iteration, the horizontal distance travelled by the golf ball before it reaches its maximum height. Give your answer to 2 decimal places.

**(3)**
