Diagram **NOT** drawn to scale

Figure 1

Figure 1 shows a sketch of part of the curve with equation

$$y = \frac{9}{(2x - 3)^{1.25}} \qquad x > \frac{3}{2}$$

The finite region R, shown shaded in Figure 1, is bounded by the curve, the line with equation $y = 9$ and the line with equation $x = 6$

This region is rotated through 2π radians about the x-axis to form a solid of revolution.

Find, by algebraic integration, the exact volume of the solid generated.
